

Do you know the six most common symptoms reported by leukaemia patients prior to diagnosis?

**Our training kit can help GPs to spot leukaemia earlier.**

The symptoms of leukaemia are non-specific and this can make leukaemia difficult to diagnose.

The GP training kit will help support primary care professionals to:

Understand and recognise symptoms of blood cancer

Identify potential patients

Refer patients for blood tests quicker

The free resource is made up of 2 x 30 minute CPD modules on blood cancer.

This has been developed in collaboration with the Royal College of General Practitioners.

The GP e-learning tool can be accessed at:
